More research on .NET deserialization

[View whitepaper's PDF](#)

I have recently published a whitepaper and a blog post as part of work research in NCC Group's website. A number of plugins have also been added to the [ysoserial.net project](#).

The whitepaper can aid security researchers as well as developers to find more deserialisation issues in .NET applications by identifying built-in methods or classes that can be abused in this process.

In [the blog post](#), I have also explained one of the most interesting findings of the research with which code could be executed upon pasting an object from the clipboard:
