[TextFormattingRunProperties exploit chain](#)

Abstract: Analysis. During deserialization the constructor with the same parameters as the GetObjectData function is automatically called. So execution reaches here.

TextFormattingRunProperties implements the ISerializable interface, and in its serialization constructor it performs this.GetObjectFromSerializationInfo("Foregr [Read more](#)

[ObjectDataProvider exploit chain](#)

Abstract: Preliminary introduction. ObjectDataProvider namespace: System.Windows.Data assembly: PresentationFramework.dll Wraps and creates an object that can be used as a binding source. ObjectDataProvider, as the name implies, provides an object as a data source to Binding. Data source WPF [Read more](#)

[Nancy deserialization vulnerability analysis](#)

Abstract: Nancy deserialization vulnerability analysis. Foreword: find an interesting .NET deserialization case to look at, a filler article. Vulnerability analysis: download from Github

<https://github.com/NancyFx/Nancy.Demo.Samples>, run and start it. Some of the utility classes are in a dll, packaged into a dll for reference. The vulnerable code is located at Nancy.Security. [Read more](#)

[SolarWinds PM deserialization vulnerability analysis](#)

Abstract: SolarWinds PM deserialization vulnerability analysis. Foreword: for a while now I have been quite interested in some exploitation of .Net deserialization, so let us follow the vulnerability briefly. XmlSerializer deserialization: before that, first get familiar with the XmlSerializer deserialization vulnerability. Deserialization process: converting an xml file into an object is done by creating a new object and calling XmlSeria [Read more](#)

[Net MVC memory shell](#)

Abstract: Net MVC memory shell. Foreword: while browsing a forum I saw a few articles about Net memory shells, which aroused my curiosity, so I casually debugged it. Structure analysis: following the approach of Java memory shells, let us trace the Filter registration flow in .NET. I created an mvc project and saw in the MvcApplication class namespace WebApplication3 { p [Read more](#)

[.Net auditing: .Net Json deserialization](#)

Abstract: .Net auditing: .Net Json deserialization. Foreword: I happened to come across an interesting Json deserialization point in .NET, so let me record the deserialization content and get straight to the point. Common .Net Json serialization and deserialization. Common data formats and serialization methods in .NET. Official documentation:

<https://www.newtonsoft.com/json> Serialization [Read more](#)

[First acquaintance with .Net auditing](#)

Abstract: First acquaintance with .Net auditing. Foreword: I know relatively little about .net, so let me learn some simple .net auditing, so that when I meet .net source code I can audit it a bit. Basic concepts. File types: ASPX.cs is the code behind the page, aspx is responsible for the display, and the server-side actions are defined in aspx.cs. .cs is a class file, a public class. .ashx is a generic handler, mainly used to write web handle [Read more](#)
