Eye Security Uncovers Actively Exploited Zero-Day in Microsoft SharePoint (CVE-2025-53770)

On the evening of **July 18, 2025**, Eye Security identified active, large-scale exploitation of a **new SharePoint remote code execution (RCE) vulnerability chain**, dubbed ToolShell. This exploit is being used in the wild to compromise on-premise SharePoint servers across the world. The new chain we elaborate in this blog, was later named [CVE-2025-53770 by Microsoft](#), as it is a variant of [CVE-2025-49706](#).

Please find more details on our [Tech Blog](#) that's actively being maintained by our Research Team:
