Readme update + ActivitySurrogateSelectorFromFile fixed

Credit section updated in Readme

ActivitySurrogateSelectorFromFile needed the E.dll file to work which was missing **from** the Release version (wrong config fixed) so ActivitySurrogateSelectorGenerator.cs has been updated to make ActivitySurrogateSelectorFromFile works as usual even with a missing E.dll

New, improved, or changed features:

- Minifying BinaryFormatter payloads has been added
- Minifying other payload formats have been improved
- Building BinaryFormatter from a JSON text
- Adding some more gadgets, formatters, and some new payload variants (use --fullhelp to see everything)
- Easier internal testing abilities for researchers (--runmytest)
- Improved SerializersHelper
- ObjectStateFormatter formatter has been removed (LosFormatter without a key == ObjectStateFormatter)
- More flexibility for the gadgets to support new options and an init method (useful for plugins and gadget writers)
- --runallformatters option to show the result of different gadgets which support a specific formatter

To see list of all the changes since January 2020, please see <https://www.mdsec.co.uk/2020/04/introducing-ysoserial-net-april-2020-improvements/>

[v1.32](#)

[8316e6e](#)

New options: --rawcmd --minify (currently working on XML, JSON, and YAML) --searchformatter

FsPickler example has been added.

Command encoding problem in XML and JSON should be resolved.

Help page shows all formatters in one line to make it more readable.

Readme has been updated.

Thanks [@irsdl](#) for the great PR!
