Data Contract Serializer

Summarize this article for me

The Windows Communication Foundation (WCF) infrastructure uses the [DataContractSerializer](#) class as the default serializer. The topics in this section provide more details for using it as a stand-alone serializer.

In This Section

[Serialization and Deserialization](#) Details how to use the [DataContractSerializer](#) class to serialize object graphs and deserialize XML documents into objects.

[Schema Import and Export](#) Explains how to generate an XML Schema definition language (XSD) schema from a .NET Framework class, or how to generate code from an XSD schema document.

Reference
