Applies To

SharePoint Server Subscription Edition

Summary

Important

- If you're currently running SharePoint Workflow Manager, you must install [SharePoint Workflow Manager \(KB5002799\)](#) to your farm before you install this cumulative update.
- If you're currently running the Classic version of Workflow Manager, you have to enable the debug flag in order to continue using Workflow Manager:

```
$farm = Get-SPFarm
$farm.ServerDebugFlags.Add(53601)
$farm.update()
iisreset
```

This security update resolves a Microsoft SharePoint Server Information Disclosure, Microsoft SharePoint Server Remote Code Execution vulnerability, Microsoft SharePoint Server Spoofing vulnerability, Microsoft Word Remote Code Execution vulnerability, Microsoft SharePoint Server Security Feature Bypass vulnerability, and Microsoft SharePoint

Elevation of Privilege vulnerability. To learn more about the vulnerabilities, see the following security advisories:

Note

- This is build **16.0.19725.20434** of the security update package.
- To apply this security update, you must have the release version of Microsoft SharePoint Server Subscription Edition installed on the computer.

Improvements and fixes

This security update contains improvements and fixes for the following nonsecurity issues in SharePoint Server Subscription Edition:

- Fixes an issue in which SharePoint 2010 workflows don't initiate after the June 2026 update is installed.

Known issues in this update

-

After you run PSConfig, run the following PowerShell commands. This setting disables a defense-in-depth feature that is currently under development that may cause a regression. Existing actor token validation checks remain in place.

```
$farm = Get-SPFarm
```

```
$farm.DisableActorTokenAudienceValidation = $true #disables only the defense-in-depth validation
```

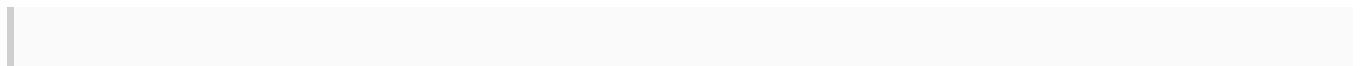

```
$farm.update ()
```

-

Customers in multi-front-end SharePoint farms with Trusted Provider or Forms authentication may face repeated authentication prompts or multiple sign-ins. This should not impact customers who have configured farms with Windows authentication. As a mitigation, configuring sticky sessions on the reverse proxy will address the majority of scenarios. Microsoft is working on a fix in the subsequent product update. While disabling `SessionCookieTransformProtectionEnabled` may appear to work around the issue, Microsoft does **not recommend** it. This setting safeguards authentication and turning it off can expose the farm to security vulnerabilities.

-

When a workflow status link is selected, `WrkStat.aspx` displays the following error message:

The WorkflowInstanceID parameter is invalid.

To workaround this issue, see [Workflow status links fail after installing the July 2026 CU.](#)

How to get and install the update

Method 1: Microsoft Update

This update is available from Microsoft Update. When you turn on automatic updating, this update will be downloaded and installed automatically. For more information about how to get security updates automatically, see [Windows Update: FAQ](#).

Method 2: Microsoft Update Catalog

To get the standalone package for this update, go to the [Microsoft Update Catalog](#) website.

Method 3: Microsoft Download Center

You can get the standalone update package through the Microsoft Download Center. Follow the installation instructions on the download page to install the update.
