INTRO

VIEWSTATE module and decoder was copied from <https://github.com/yuvadm/viewstate.git> and all kudos go to yuvadm.

I just wrote a small tool to easily decode ASP.NET ``\_\_VIEWSTATE`` variables without having to install the viewstate module into the system with administrative privileges and be able to decode the variables with a small script using a terminal, without writting python code.

Sometimes when doing webpentesting against a ASP web application is useful a tool like this.

USAGE

```
$ ./decoder.py "/wEPDwUKMTU5MTA2ODYwOWRkoCvvBWgU0H7PD446qvE0F6GTCq0="
** ASP.NET __VIEWSTATE decoder **

[*] Decoding __VIEWSTATE:
/wEPDwUKMTU5MTA2ODYwOWRkoCvvBWgU0H7PD446qvE0F6GTCq0=
(('1591068609', None), None)
```

DEFENSE

To protect against this attacks turn `` EnableViewStateMac ` property to ` True ` in the ` machine.config ` file. To encrypt turn property ` validation ` to ` 3DES ``.

DISCLAIMER

Use at your own risk in an environment that you are allowed to attack.
