## \_\_Challenges\_\_

| Category | Name                      | Objective                        | Difficulty<br>[ ] |
|----------|---------------------------|----------------------------------|-------------------|
| Web      | <a href="#">GateCrash</a> | SQL injection via CRLF injection | [ ]               |

| Category  | Name                                 | Objective                                                                                                                                                                                                                      | Difficulty<br>[ ] [ ] [ ] [ ] [ ] |
|-----------|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| Web       | <a href="#">Nexus Void</a>           | Dotnet deserialisaiton via SQL injection                                                                                                                                                                                       | [ ] [ ]                           |
| Web       | <a href="#">PhantomFeed</a>          | Race condition via reDos, open-redirect in Nuxt.js to perofrm CSRF and leak OAuth 2 access token, RCE in Reportlab                                                                                                             | [ ] [ ] [ ]                       |
| Pwn       | <a href="#">Great Old Talisman</a>   | Overwrite <code>exit@G0T</code> with the address of the function that reads the flag                                                                                                                                           | [ ]                               |
| Pwn       | <a href="#">Zombienator</a>          | Make 9 allocations and 8 frees to leak a libc address, abuse <code>scanf("ld")</code> to bypass the canary check, use <code>pwntools</code> struct to pack doubles, and perform a <code>ret2libc</code> attack with one gadget | [ ] [ ]                           |
| Pwn       | <a href="#">Zombiedo te</a>          | Leverage a single <code>malloc</code> call, an out of bounds read and two out of bounds writes in order into code execution in <code>glibc 2.34</code>                                                                         | [ ] [ ] [ ]                       |
| Reversing | <a href="#">WindowOf Opportunity</a> | Reversing simple flag checker algorithm                                                                                                                                                                                        | [ ]                               |
| Reversing | <a href="#">BioBundle</a>            | Reversing a flag checker embedded in a library encrypted and loaded with <code>memfd_create</code>                                                                                                                             | [ ] [ ]                           |
| Reversing | <a href="#">RiseFrom TheDead</a>     | Reversing a flag encoder then recovering a core dump to retrieve the flagg                                                                                                                                                     | [ ] [ ] [ ]                       |
| Forensics | <a href="#">One Step Closer</a>      | Windows JScript deobfuscation - Malware delivery - VBS debugging                                                                                                                                                               | [ ]                               |
| Forensics | <a href="#">ZombieNet</a>            | OpenWrt firwmare analysis - MIPS binary emulation using QEMU                                                                                                                                                                   | [ ] [ ]                           |
| Forensics | <a href="#">Shadow of the Undead</a> | Meterpreter parsing/decryption - custom windows shellcode emulation                                                                                                                                                            | [ ] [ ] [ ]                       |
| Crypto    | <a href="#">MSS</a>                  | Use CRT to get the entire secret on a Mignotte Secret Sharing scheme                                                                                                                                                           | [ ]                               |
| Crypto    | <a href="#">Mayday Mayday</a>        | Factor N by exploiting the partial leakage of the CRT components                                                                                                                                                               | [ ] [ ]                           |
| Crypto    | <a href="#">Zombie Rolled</a>        | Solve a diophantine equation to get the private key and apply LLL to recover the flag from the signature                                                                                                                       | [ ] [ ] [ ]                       |
