Microsoft .NET ViewState Parser and the Burp suite extension ViewStateDecoder

=====

Language/[English](#)

This tool is an extension for Burp Suite, a product of PortSwigger. It supports Burp Pro/Community.

Overview

This extension is a tool that can display the ViewState of ASP.NET. Decoding can also be done from the command line.

From Burp suite v2020.3 onwards, ViewState is no longer displayed. For this reason, use with Burp suite v2020.x and later versions is assumed.

It also fixes some of the problems that existed in the ViewState of the existing Burp suite.

About the latest version

The main repository (master) may contain code that is under development. Please download the stable release version from below.

- <https://github.com/raise-isayan/ViewStateDecoder/releases>

Please use the following versions

- Burp suite versions earlier than v2023.1.2
 - ViewStateDecoder v0.5.3.0 or earlier
- Burp suite versions later than v2023.1.2
 - ViewStateDecoder v3.0.0 or later
 - ViewStateDecoder v0.5.3.0 or earlier (usable at present)

How to use

The Burp suite Extender can be loaded with the following steps.

1. Click [add] on the [Extender] tab
2. Click [Select file ...] and choose ViewStateDecoder.jar.
3. Click "Next", confirm that no error appears, and then close the dialog with "Close".

Message tab

When a __VIEWSTATE parameter exists, in the Message Tab of History you can select ViewState from the "select extension..." button.

[\[image: ViewState-Tree Tab\]](#)

You can switch tabs to display the RAW JSON.

[\[image: ViewState-JSON Tab\]](#)

ViewStateDecoder tab

[\[image: ViewStateDecoder Tab\]](#)

- [expand] button

Expands the selected tree.

- [collapse] button

Collapses the selected tree.

- [Decode] button

Decodes the ViewState value that was entered.

- [Clear] button

Clears the decoded value.

Command line options

The ViewState value can be decoded from the command line.

```
java -jar ViewStateDecoder.jar -vs=<viewState>
```

Specify the ViewState you want to decode in <viewState>. The response is output in JSON format.

Example)

```
java -jar ViewStateDecoder.jar -vs=/wEPDwUKLTM0MjUyMzM2OWRkmW75zyss5UR0sLtrTEu0q7AGUDk=

{
  "Pair": [
    {
      "Pair": [
        {
          "string": "-342523369"
        },
        null
      ]
    },
    null
  ]
}
```

Even when the ViewState is URLEncoded, the ViewState is displayed after URLDecoding.
Example)

```
java -jar ViewStateDecoder.jar -
vs=%2FwEPDwUKLTM0MjUyMzM2OWRkmW75zyss5UR0sLtrTEu0q7AGUDk%3D
```

Also, with the -gui option it can be started standalone, without needing Burp suite.

```
java -jar ViewStateDecoder.jar -gui
```

Build

```
gradlew release
```

Runtime environment

.Java

- JRE (JDK) 17 (Open JDK is recommended) (<https://openjdk.java.net/>)

.Burp suite

- v2023.1.2 or higher (<http://www.portswigger.net/burp/>)

Development environment

- NetBean 18.0 (<https://netbeans.apache.org/>)
- Gradle 7.5 (<https://gradle.org/>)

Required libraries

Building requires the [BurpExtensionCommons](#) library separately.

- BurpExtensionCommons v3.1.x
 - <https://github.com/raise-isayan/BurpExtensionCommons>

Libraries used

- google gson (<https://github.com/google/gson>)
 - Apache License 2.0
 - <https://github.com/google/gson/blob/master/LICENSE>
- Universal Chardet for java (<https://code.google.com/archive/p/juniversalchardet/>)
 - MPL 1.1
 - <https://code.google.com/archive/p/juniversalchardet/>

It has been confirmed to work with the following version.

- Burp suite v2023.9.2

Notes

This tool was developed by me personally, on my own initiative, and PortSwigger has nothing to do with it. Please do not contact PortSwigger about any problems caused by using this tool.

Microsoft .NET ViewState Parser and Burp suite extension ViewStateDecoder
=====

Language/[Japanese](#)

This tool is an extension of PortSwigger product, Burp Suite. Supports Burp suite Professional/Community.

Overview

This extension is a tool that allows you to display ViewState of ASP.NET. Note that it is also possible to decode using the command line.

ViewState has been hidden in Burp suite since v2020.3. It is intended for use with Burp suite v2020.x or later.

Fixed some issues with ViewState in the existing Burp suite.

About the latest version

The main repository (master) may contain code under development. Please download the stable release version from the following.

- <https://github.com/raise-isayan/ViewStateDecoder/releases>

Please use the following versions

- Burp suite v2023.1.2 or less than
 - ViewStateDecoder v2.2.14.0 or less than
- Burp suite v2023.1.2 or above
 - ViewStateDecoder v3.0.0 or above
 - ViewStateDecoder v0.5.3.0 or less (currently available)

How to Use

The Burp Suite Extender can be loaded by following the steps below.

1. Click [add] on the [Extender] tab
2. Click [Select file ...] and select BigIPDiscover.jar.
3. Click [Next], confirm that no error is occurring, and close the dialog with [Close].

Message Tab

If the __VIEWSTATE parameter exists, you can select the ViewState from the "select extension..." button in the Message Tab of History. button on the Message Tab of the History to select the ViewState.

[\[image: ViewState-Tree Tab\]](#)

Switch tabs to view Raw JSON.

[\[image: ViewState-JSON Tab\]](#)

ViewStateDecoder Tab

[\[image: ViewStateDecoder Tab\]](#)

- [expand] Button

Expand the selected tree.

- [collapse] Button

Collapse the selected tree.

- [Decode] Button

Decode the ViewState value.

- [Clear] Button

Clear the decoded value.

Command line option

It is possible to decode the value of ViewState from the command line.

```
java -jar ViewStateDecoder.jar -vs=<viewState>
```

Specify the ViewState to be decoded in <viewState>. The response will be output in JSON format.

example)

```
java -jar ViewStateDecoder.jar -vs=/wEPDwUKLTM0MjUyMzM2OWRkmW75zyss5UR0sLtrTEu0q7AGUDk=

MAC: true
digest: 996ef9cf2b2ce5444eb0bb6b4c4b8eabb0065039
{
  "Pair": [
    {
      "Pair": [
        {
          "string": "-342523369"
        },
        null
      ]
    },
    null
  ]
}
```

Even if the ViewState is URLEncoded, the ViewState will be output after URLDecode.

example)

```
java -jar ViewStateDecoder.jar -
vs=%2FwEPDwUKLTM0MjUyMzM2OWRkmW75zyss5UR0sLtrTEu0q7AGUDk%3D
```

You can also launch it standalone with the -gui option, which does not require Burp suite.

```
java -jar ViewStateDecoder.jar -gui
```

build

```
gradlew release
```

Runtime environment

.Java

- JRE (JDK) 17 (Open JDK is recommended) (<https://openjdk.java.net/>)

.Burp suite

- v2023.1.2 or higher (<http://www.portswigger.net/burp/>)

Development environment

- NetBean 18.0 (<https://netbeans.apache.org/>)
- Gradle 7.5 (<https://gradle.org/>)

Required libraries

Building requires a [BurpExtensionCommons](#) library.

- BurpExtensionCommons v3.1.x
 - <https://github.com/raise-isayan/BurpExtensionCommons>

Use Library

- google gson (<https://github.com/google/gson>)
 - Apache License 2.0
 - <https://github.com/google/gson/blob/master/LICENSE>
- Universal Chardet for java (<https://code.google.com/archive/p/juniversalchardet/>)
 - MPL 1.1
 - <https://code.google.com/archive/p/juniversalchardet/>

Operation is confirmed with the following versions.

- Burp suite v2023.9.2

important

This tool developed by my own personal use, PortSwigger company is not related at all. Please do not ask PortSwigger about problems, etc. caused by using this tool.
