ApplicationTrust.FromXml(SecurityElement) Method

Definition

Namespace: [System.Security.Policy](#) Assembly: System.Security.Permissions.dll
Assembly:mscorlib.dll Package: System.Security.Permissions v11.0.0-preview.5.26302.115
Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#) Source: [ApplicationTrust.cs](#)

Important

Some information relates to prerelease product that may be substantially modified before it's released. Microsoft makes no warranties, express or implied, with respect to the information provided here.

Reconstructs an [ApplicationTrust](#) object with a given state from an XML encoding.

```
public:  
virtual void FromXml(System::Security::SecurityElement ^ element);
```

```
public void FromXml(System.Security.SecurityElement element);
```

```
abstract member FromXml : System.Security.SecurityElement -> unit  
override this.FromXml : System.Security.SecurityElement -> unit
```

```
Public Sub FromXml (element As SecurityElement)
```

Parameters

element [SecurityElement](#)

The XML encoding to use to reconstruct the [ApplicationTrust](#) object.

Implements

[FromXml\(SecurityElement\)](#)

Exceptions

[ArgumentNullException](#)

`element` is `null`.

[ArgumentException](#)

The XML encoding used for `element` is invalid.

Remarks

Important

Calling this method with untrusted data is a security risk. Call this method only with trusted data. For more information, see [Validate All Inputs](#).

The [ToXml](#) and [FromXml](#) methods are implemented to make [ApplicationTrust](#) objects XML-encodable for security policy use.
