AssemblyInstaller Class

Definition

Namespace: [System.Configuration.Install](#) Assembly: System.Configuration.Install.dll

Important

Some information relates to prerelease product that may be substantially modified before it's released. Microsoft makes no warranties, express or implied, with respect to the information provided here.

Loads an assembly, and runs all the installers in it.

```
public ref class AssemblyInstaller : System::Configuration::Install::Installer
```

```
public class AssemblyInstaller : System.Configuration.Install.Installer
```

```
type AssemblyInstaller = class
    inherit Installer
```

```
Public Class AssemblyInstaller
    Inherits Installer
```

Inheritance

[Object](#)

[MarshalByRefObject](#)

[Component](#)

[Installer](#)

AssemblyInstaller

Examples

In the following example, an [AssemblyInstaller](#) is created by invoking the [AssemblyInstaller](#) constructor. The properties of this object are set and the [Install](#) and [Commit](#) methods are called to install the `MyAssembly.exe` assembly.

```

#using <System.dll>
#using <System.Configuration.Install.dll>

using namespace System;
using namespace System::Configuration::Install;
using namespace System::Collections;
using namespace System::Collections::Specialized;
int main()
{
    IDictionary^ mySavedState = gcnew Hashtable;
    Console::WriteLine( "" );
    try
    {

        // Set the commandline argument array for 'logfile'.
        array<String^>commandLineOptions = {"/LogFile=example.log"};

        // Create an object of the 'AssemblyInstaller' class.
        AssemblyInstaller^ myAssemblyInstaller = gcnew AssemblyInstaller(
            "MyAssembly.exe", commandLineOptions );
        myAssemblyInstaller->UseNewContext = true;

        // Install the 'MyAssembly' assembly.
        myAssemblyInstaller->Install( mySavedState );

        // Commit the 'MyAssembly' assembly.
        myAssemblyInstaller->Commit( mySavedState );
    }
    catch ( Exception^ e )
    {
        Console::WriteLine( e->Message );
    }
}

```

```

using System;
using System.Configuration.Install;
using System.Collections;
using System.Collections.Specialized;

class AssemblyInstaller_Example
{
    static void Main()
    {
        IDictionary mySavedState = new Hashtable();

        Console.WriteLine( "" );

        try
        {
            // Set the commandline argument array for 'logfile'.
            string[] commandLineOptions = new string[ 1 ] {"/LogFile=example.log"};

            // Create an object of the 'AssemblyInstaller' class.
            AssemblyInstaller myAssemblyInstaller = new
                AssemblyInstaller( "MyAssembly.exe" , commandLineOptions );

            myAssemblyInstaller.UseNewContext = true;

            // Install the 'MyAssembly' assembly.
            myAssemblyInstaller.Install( mySavedState );

            // Commit the 'MyAssembly' assembly.
            myAssemblyInstaller.Commit( mySavedState );
        }
        catch (Exception e)
        {
            Console.WriteLine( e.Message );
        }
    }
}

```

```
Imports System.Configuration.Install
Imports System.Collections
Imports System.Collections.Specialized

Class AssemblyInstaller_Example

    Shared Sub Main()
        Dim mySavedState = New Hashtable()

        Console.WriteLine("")

        Try
            ' Set the commandline argument array for 'logfile'.
            Dim commandLineOptions(0) As String
            commandLineOptions(0) = "/LogFile=example.log"

            ' Create an object of the 'AssemblyInstaller' class.
            Dim myAssemblyInstaller As _
                New AssemblyInstaller("MyAssembly.exe", commandLineOptions)

            myAssemblyInstaller.UseNewContext = True

            ' Install the 'MyAssembly' assembly.
            myAssemblyInstaller.Install(mySavedState)

            ' Commit the 'MyAssembly' assembly.
            myAssemblyInstaller.Commit(mySavedState)
        Catch e As Exception
            Console.WriteLine(e.Message)
        End Try
    End Sub
End Class
```

Constructors

Name	Description
AssemblyInstaller()	

Initializes a new instance of the [AssemblyInstaller](#) class.

||| [\[AssemblyInstaller\(Assembly, String\[\]\)\]\(https://learn.microsoft.com/en-us/dotnet/api/system.configuration.install.assemblyinstaller.-ctor?view=netframework-4.8.1#system-configuration-install-assemblyinstaller-ctor\(system-reflection-assembly-system-string\(\)\)\)](https://learn.microsoft.com/en-us/dotnet/api/system.configuration.install.assemblyinstaller.-ctor?view=netframework-4.8.1#system-configuration-install-assemblyinstaller-ctor(system-reflection-assembly-system-string())) |

Initializes a new instance of the [AssemblyInstaller](#) class, and specifies both the assembly to install and the command line to use when creating a new [InstallContext](#) object.

||| [AssemblyInstaller\(String, String\[\]\)](#)([https://learn.microsoft.com/en-us/dotnet/api/system.configuration.install.assemblyinstaller.-ctor?view=netframework-4.8.1#system-configuration-install-assemblyinstaller-ctor\(system-string-system-string\(\)\)](https://learn.microsoft.com/en-us/dotnet/api/system.configuration.install.assemblyinstaller.-ctor?view=netframework-4.8.1#system-configuration-install-assemblyinstaller-ctor(system-string-system-string()))) |

Initializes a new instance of the [AssemblyInstaller](#) class, and specifies both the file name of the assembly to install and the command line to use when creating a new [InstallContext](#) object for the assembly's installation.

||

Properties

| Name | Description | | | [Assembly](#) |

Gets or sets the assembly to install.

||| [CanRaiseEvents](#) |

Gets a value indicating whether the component can raise an event.

(Inherited from [Component](#)) | | | [CommandLine](#) |

Gets or sets the command line to use when creating a new [InstallContext](#) object for the assembly's installation.

||| [Container](#) |

Gets the [IContainer](#) that contains the [Component](#).

(Inherited from [Component](#)) | | | [Context](#) |

Gets or sets information about the current installation.

(Inherited from [Installer](#)) | | | [DesignMode](#) |

Gets a value that indicates whether the [Component](#) is currently in design mode.

(Inherited from [Component](#)) | | | [Events](#) |

Gets the list of event handlers that are attached to this [Component](#).

(Inherited from [Component](#)) | | | [HelpText](#) |

Gets the help text for all the installers in the installer collection.

||| [Installers](#) |

Gets the collection of installers that this installer contains.

(Inherited from [Installer](#)) | | | [Parent](#) |

Gets or sets the installer containing the collection that this installer belongs to.

(Inherited from [Installer](#)) | | | [Path](#) |

Gets or sets the path of the assembly to install.

||| [Site](#) |

Gets or sets the [ISite](#) of the [Component](#).

(Inherited from [Component](#)) | | | [UseNewContext](#) |

Gets or sets a value indicating whether to create a new [InstallContext](#) object for the assembly's installation.

| |

Methods

| Name | Description | | | [CheckIfInstallable\(String\)](#) |

Checks to see if the specified assembly can be installed.

| | | [Commit\(IDictionary\)](#) |

Completes the installation transaction.

| | | [CreateObjRef\(Type\)](#) |

Creates an object that contains all the relevant information required to generate a proxy used to communicate with a remote object.

(Inherited from [MarshalByRefObject](#)) | | | [Dispose\(\)](#) |

Releases all resources used by the [Component](#).

(Inherited from [Component](#)) | | | [Dispose\(Boolean\)](#) |

Releases the unmanaged resources used by the [Component](#) and optionally releases the managed resources.

(Inherited from [Component](#)) | | | [Equals\(Object\)](#) |

Determines whether the specified object is equal to the current object.

(Inherited from [Object](#)) | | | [GetHashCode\(\)](#) |

Serves as the default hash function.

(Inherited from [Object](#)) | | | [GetLifetimeService\(\)](#) |

Obsolete.

Retrieves the current lifetime service object that controls the lifetime policy for this instance.

(Inherited from [MarshalByRefObject](#)) | | | [GetService\(Type\)](#) |

Returns an object that represents a service provided by the [Component](#) or by its [Container](#).

(Inherited from [Component](#)) | | | [GetType\(\)](#) |

Gets the [Type](#) of the current instance.

(Inherited from [Object](#)) | | | [InitializeLifetimeService\(\)](#) |

Obsolete.

Obtains a lifetime service object to control the lifetime policy for this instance.

(Inherited from [MarshalByRefObject](#)) | | | [Install\(IDictionary\)](#) |

Performs the installation.

| | | [MemberwiseClone\(\)](#) |

Creates a shallow copy of the current [Object](#).

(Inherited from [Object](#)) | | | [MemberwiseClone\(Boolean\)](#) |

Creates a shallow copy of the current [MarshalByRefObject](#) object.

(Inherited from [MarshalByRefObject](#)) | | | [OnAfterInstall\(IDictionary\)](#) |

Raises the [AfterInstall](#) event.

(Inherited from [Installer](#)) | | | [OnAfterRollback\(IDictionary\)](#) |

Raises the [AfterRollback](#) event.

(Inherited from [Installer](#)) | | | [OnAfterUninstall\(IDictionary\)](#) |

Raises the [AfterUninstall](#) event.

(Inherited from [Installer](#)) | | | [OnBeforeInstall\(IDictionary\)](#) |

Raises the [BeforeInstall](#) event.

(Inherited from [Installer](#)) | | | [OnBeforeRollback\(IDictionary\)](#) |

Raises the [BeforeRollback](#) event.

(Inherited from [Installer](#)) | | | [OnBeforeUninstall\(IDictionary\)](#) |

Raises the [BeforeUninstall](#) event.

(Inherited from [Installer](#)) | | | [OnCommitted\(IDictionary\)](#) |

Raises the [Committed](#) event.

(Inherited from [Installer](#)) | | | [OnCommitting\(IDictionary\)](#) |

Raises the [Committing](#) event.

(Inherited from [Installer](#)) | | | [Rollback\(IDictionary\)](#) |

Restores the computer to the state it was in before the installation.

| | | [ToString\(\)](#) |

Returns a [String](#) containing the name of the [Component](#), if any. This method should not be overridden.

(Inherited from [Component](#)) | | | [Uninstall\(IDictionary\)](#) |

Removes an installation.

| |

Events

Name	Description
AfterInstall	

Occurs after the [Install\(IDictionary\)](#) methods of all the installers in the [Installers](#) property have run.

(Inherited from [Installer](#)) | | | [AfterRollback](#) |

Occurs after the installations of all the installers in the [Installers](#) property are rolled back.

(Inherited from [Installer](#)) | | | [AfterUninstall](#) |

Occurs after all the installers in the [Installers](#) property perform their uninstallation operations.

(Inherited from [Installer](#)) | | | [BeforeInstall](#) |

Occurs before the [Install\(IDictionary\)](#) method of each installer in the installer collection has run.

(Inherited from [Installer](#)) | | | [BeforeRollback](#) |

Occurs before the installers in the [Installers](#) property are rolled back.

(Inherited from [Installer](#)) | | | [BeforeUninstall](#) |

Occurs before the installers in the [Installers](#) property perform their uninstall operations.

(Inherited from [Installer](#)) | | | [Committed](#) |

Occurs after all the installers in the [Installers](#) property have committed their installations.

(Inherited from [Installer](#)) | | | [Committing](#) |

Occurs before the installers in the [Installers](#) property commit their installations.

(Inherited from [Installer](#)) | | | [Disposed](#) |

Occurs when the component is disposed by a call to the [Dispose\(\)](#) method.

(Inherited from [Component](#)) | |
