SessionStateItemCollection.Item[] Property

Definition

Namespace: [System.Web.SessionState](#) Assembly: System.Web.dll

Important

Some information relates to prerelease product that may be substantially modified before it's released. Microsoft makes no warranties, express or implied, with respect to the information provided here.

Gets or sets a value in the collection.

Overloads

Name	Description
<code>Item[Int32]</code>	https://learn.microsoft.com/en-us/dotnet/api/system.web.sessionstate.sessionstateitemcollection.item?view=netframework-4.8.1#system-web-sessionstate-sessionstateitemcollection-item(system-int32)

Gets or sets a value in the collection by numerical index.

```
||| [Item[String]](https://learn.microsoft.com/en-us/dotnet/api/system.web.sessionstate.sessionstateitemcollection.item?view=netframework-4.8.1#system-web-sessionstate-sessionstateitemcollection-item\(system-string\)) |
```

Gets or sets a value in the collection by name.

```
||
```

Item[Int32]

Gets or sets a value in the collection by numerical index.

```
public:
    property System::Object ^ default[int] { System::Object ^ get(int index); void set(int index, System::Object ^ value); };
```

```
public object this[int index] { get; set; }
```

```
member this.Item(int) : obj with get, set
```

```
Default Public Property Item(index As Integer) As Object
```

Parameters

index [Int32](#)

The numerical index of the value in the collection.

Property Value

[Object](#)

The value in the collection stored at the specified index. If the specified key is not found, attempting to get it returns `null`, and attempting to set it creates a new element using the specified key.

Implements

```
[Item[Int32]](https://learn.microsoft.com/en-us/dotnet/api/system.web.sessionstate.isessionstateitemcollection.item?view=netframework-4.8.1#system-web-sessionstate-isessionstateitemcollection-item\(system-int32\))
```

Examples

Important

Using an instance of this type with untrusted data is a security risk. Use this object only with trusted data. For more information, see [Validate All Inputs](#).

The following code example sets and gets values in a [SessionStateItemCollection](#) collection by numerical index.

```
SessionStateItemCollection sessionItems = new SessionStateItemCollection();

sessionItems["ZipCode"] = "98072";
sessionItems["Email"] = "someone@example.com";

for (int i = 0; i < items.Count; i++)
    Response.Write("sessionItems[" + i + "] = " + sessionItems[i].ToString() + "<br />");
```

```
Dim sessionItems As SessionStateItemCollection = New SessionStateItemCollection()

sessionItems("ZipCode") = "98072"
sessionItems("Email") = "someone@example.com"

For i As Integer = 0 To items.Count - 1
    Response.Write("sessionItems(" & i & ") = " & sessionItems(i).ToString() & "<br />")
Next
```

Applies to

Item[String]

Gets or sets a value in the collection by name.

```
public:
    property System::Object ^ default[System::String ^] { System::Object ^
get(System::String ^ name); void set(System::String ^ name, System::Object ^ value); };
```

```
public object this[string name] { get; set; }
```

```
member this.Item(string) : obj with get, set
```

Default Public Property Item(name As **String**) As Object

Parameters

name **String**

The key name of the value in the collection.

Property Value

Object

The value in the collection with the specified name. If the specified key is not found, attempting to get it returns `null`, and attempting to set it creates a new element using the specified key.

Implements

[Item[String]]([https://learn.microsoft.com/en-us/dotnet/api/system.web.sessionstate.isessionstateitemcollection.item?view=netframework-4.8.1#system-web-sessionstate-isessionstateitemcollection-item\(system-string\)\)](https://learn.microsoft.com/en-us/dotnet/api/system.web.sessionstate.isessionstateitemcollection.item?view=netframework-4.8.1#system-web-sessionstate-isessionstateitemcollection-item(system-string)))

Examples

Important

Using an instance of this type with untrusted data is a security risk. Use this object only with trusted data. For more information, see [Validate All Inputs](#).

The following code example sets and gets values in a [SessionStateItemCollection](#) collection by name.

```
SessionStateItemCollection items = new SessionStateItemCollection();

items["LastName"] = "Wilson";
items["FirstName"] = "Dan";

foreach (string s in items.Keys)
    Response.Write("items[" + s + "] = " + items[s].ToString() + "<br />");
```

```
Dim items As SessionStateItemCollection = New SessionStateItemCollection()

items("LastName") = "Wilson"
items("FirstName") = "Dan"

For Each s As String In items.Keys
    Response.Write("items(" & s & ") = " & items(s).ToString() & "<br />")
Next
```
