Telerik Report Server Insecure Deserialization Vulnerability - Telerik Report Server
New to Telerik Report Server ? [Start a free 30-day trial](#)

[Insecure Deserialization Vulnerability]()

Updated over 1 year ago

[Description]()

- Report Server 2024 Q1 (10.0.24.130) and older.

[Root Cause]()

In Progress® Telerik® Report Server versions prior to 2024 Q1 (10.0.24.130), a remote code execution attack is possible through an insecure deserialization vulnerability.

[Solution]()

Updating to [Report Server 2024 Q1 \(10.0.24.305\)](#) or higher is the only way to remove this vulnerability. Take the following steps to get started:

- Go to [Your Account | Report Server](#) Downloads, sign in with your Telerik account, and download the latest version of Report Server installer (it is an `msi` file).
- Carefully follow the instructions in the [Upgrading Report Server | Telerik Report Server](#) documentation to update all your instances.

[Notes]()

- We would like to thank 07842c0e165d4d2d8733dd4eab48b3ed0f7afe38 working with Trend Micro Zero Day Initiative for their responsible disclosure and cooperation.
- You can check what version you are running by:
- Go to your Report Server web UI and log in using an account with administrator rights.
- Open the Configuration page (`root-uri/Configuration/Index`).
- Select the About tab, the version number is displayed in the pane on the right.
- Our customers' security is of the utmost importance to us. If you have any questions, concerns, or problems related to this issue, you can open a new [Technical Support](#) case (Technical Support is available to customers with an active Support subscription).
