Whenever I load a solution in Visual Studio with a specific project set as the startup project, I get a VSHost32.exe crash. If I keep on going and launch the application, I get a COMException:

```
{"Invalid value for registry (Exception from HRESULT: 0x80040153 (REGDB_E_INVALIDVALUE))"}
```

With a stacktrace:

```
at System.Runtime.InteropServices.RuntimeEnvironment.GetDeveloperPath()  
at System.AppDomain.SetupFusionStore(AppDomainSetup info)  
at System.AppDomain.SetupDomain(Boolean allowRedirects, String path, String configFile)
```

This can occur when a project's config file has `developmentMode` set, but the machine doesn't have a `devPath` set.

```
<runtime>
  <developmentMode developerInstallation="true"/>
</runtime>
```

Removing that will fix it up.

Droj

You can also set DEVPATH in your environment, if you don't want to, or can't, change the exe's config file.

This may also be in the machine.config file, for example
C:\Windows\Microsoft.NET\Framework\v4.0.30319\Config\machine.config. I've occasionally set it there and then forgotten.

Navigate to C:\Windows\Microsoft.NET\Framework64\v4.0.30319\Config\machine.config and remove the below setting from your machine config

```
<developmentModedeveloperinstallation="true"/>
```
